FILE REFERENCE OF-AF-ACE 02

To the Canada Energy Regulator's Secretary of the Commission,

The Canada Border Services Agency (CBSA) is requesting an exception from filing geospatial or shape file data as requested in file OF-AF-ACE 02. The CBSA is responsible for providing the transfer of people and goods across Canada's international borders, and is not a pipeline company. We do not have the software, IT knowledge, nor staff who are trained to create or manipulate geospatial or shape file data.

The CBSA owns a natural gas service line, composed of two 33.4 mm diameter HDPE pipes. It is considered a secondary service line and is operating at a pressure of 5 psig. It is used to supply natural gas to two very small buildings on the USA side of the Canada-USA border, at the Climax-Turner Port of Entry. Along with the above information, the CBSA will provide the following information via email to the Secretary of the Commission before 30 June 2022:

- A complete description of the facilities regulated by the CER;
- The start and end point of the facilities;
- A description of any crossings along the natural gas line's route.

Thank you,

Hayley Buchanan
